CROCUS

SINGLE  
EARLY TULIP

PAPER WHITE  
NARCISSUS

## Cultural Directions

These directions are the same as followed by the most successful growers. Time for planting out-of-doors is from September until the ground freezes.

**Hyacinths in Pots.**—Use any good, rich soil, mixed with a little sand. For a single plant use a 5-inch pot. Break off any offsets which appear at the base of the bulbs, and in potting place each bulb so that its top shall be half an inch below the surface of the soil and an inch below the rim of the pot. The soil should be of usual natural moisture, and should be pressed moderately firm. After potting, water thoroughly and place in some cool, dark place for about six weeks.

Success in forcing depends much on their having strong roots before being brought to the light. The top grows rapidly, and unless the roots are started much in advance they are unable to nourish the plant, and failure results.

To obtain dwarf foliage and fine flower spikes, Hyacinths, when being forced, should have plenty of manure, water and fresh air, and should have as much light as possible. The blooms last much longer if shaded from the sun after they show color.

**Hyacinths in the Open Ground.**—Any good garden soil will suit Hyacinths and should be planted about 6 inches apart and 5 inches deep.

## Finest Named Dutch Hyacinths

Single Hyacinths are preferable to the double varieties, as they produce larger spikes and force more easily.

### TOP SIZE BULBS SELECTED

#### Single Red, Rose and Pink

	Each	Dozen
Garibaldi, carmine, large spike, very early.....	\$ .25	\$2.00
General de Wet, very fine light rose, broad spike .....	.25	2.00

### Darwin Tulips

Too much cannot be said in praise of this class of tulips. They excel in brilliancy of colors, perfect form of flowers and very tall, strong stems. For splendid effect in borders and planted in small groups amongst shrubs they are unsurpassed. For cut flowers and decorating purposes they are of great value and can easily be forced in March or April. The bulbs should be planted six to eight inches deep and about five inches apart.
